

Traffic and Parking Controls

The District allows driving on District property and parking in designated spaces on District property for the convenience of students, employees and visitors to District facilities. The superintendent or designee will develop, with the cooperation of local traffic authorities if necessary, a plan for accommodating traffic flow on school property, particularly at the beginning and end of the school day and before and after school events. Designated crosswalks and safety zones will be marked appropriately for the safety of students and others.

Driving and parking on District property are privileges, granted by the District to persons who have reasons to be in or on District property. Administrative staff will be responsible for assigning parking areas to staff, students and visitors at District buildings. Parking will be designated for persons with special needs. Fees may be charged for student parking.

District administrators have the authority to prohibit any person from driving or parking on District property and may direct any person to move his or her vehicle. A driver who does not yield to District vehicles, refuses to move a vehicle as directed by District employees, operates a vehicle in a manner that is not safe, or otherwise refuses to follow District rules will be prohibited from driving or parking on district property and may have their vehicle towed at their own expense. District employees and students may also receive additional discipline.

Any behavior or item prohibited in school (including, but not limited to, weapons, alcohol and tobacco products) is also prohibited in district parking lots and in vehicles on district property.

Vehicles parked on District property may be searched in accordance with law. When necessary, the District will request assistance with traffic control or local law enforcement.

Students who drive to school and wish to park on school property during the school day must obtain and display a parking permit to do so. If the number of permit requests exceeds the number of available spaces, the superintendent or designee will develop a system of processing requests, such as giving priority to seniors, students who have mobility issues or students who participate in activities that occur before or after school. The superintendent or designee may assign other conditions for receiving parking permits including, but not limited to, maintaining adequate grades and good conduct.
