

# Best Practices Guide for Numeracy

Introduction: This guide is a foundation for teaching specially designed instruction in the area of numeracy. One of the goals in using this guide is to give special educators a common language for math instruction. We serve a large district. As such, the need for a common language is imperative.

This guide will be reviewed and updated as new research becomes integrated into our work.

Please contact your Numeracy or Curriculum Facilitator if you have questions or need support in using the content in this guide.
